

# Hack the Markets

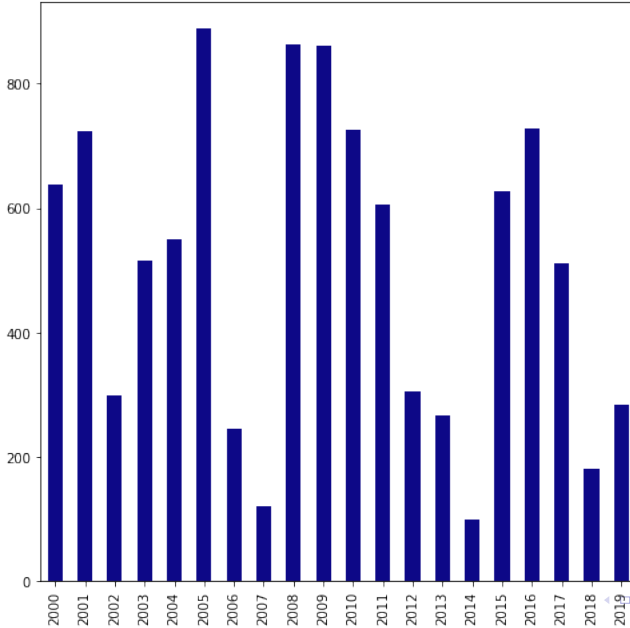

In 2010, the average per year of the maximum price reached by the pair during the week is higher than in the remaining years; the opposite is the case in 2008.

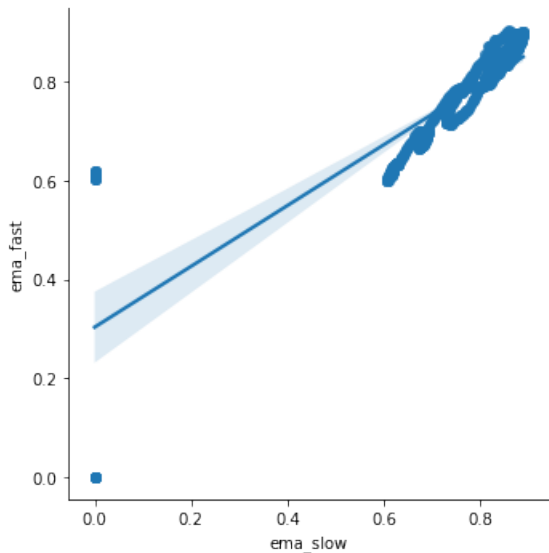

The average price of the pair at the beginning of the day is higher in 2008, however, it is the year in which the average price of the pair takes lower values.

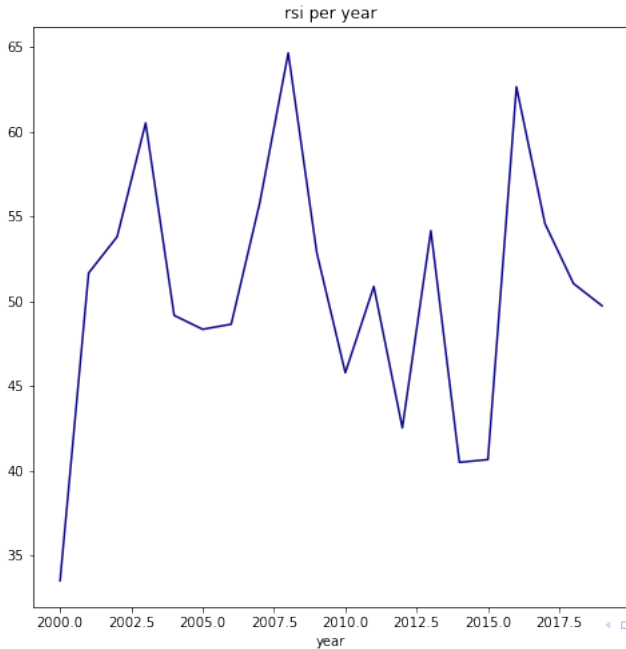

volatility

the average of the intensity of the changes per year in the price has been varied, 2014 has been the year with the least variation.

The correlation between ema fast and ema slow shows us that the former has surpassed the slow moving average, thus indicating the beginning of an uptrend.
